Net Weight: 50 lbs.

DO NOT STORE IN DIRECT SUNLIGHT

Description For Use:

HypaLink Nourish is compatible with most materials, except those with a very low pH (less than 4.0). It is not compatible with calcium nitrate (sodium nitrate is ok). To be safe, an initial jar test is always recommended when mixing this product with companion materials for the first time.

HypaLink Nourish is designed to be an easy to use product that provides a balanced ratio of each ingredient when diluted with water. To retain its original purity keep the container tightly sealed between uses. Dilute only as much concentrate as needed for each use. We suggest pre-mixing the powder with water in a separate container before adding it to the final spray tank to ensure maximum dissolution, especially in cold water.

HypaLink Nourish is suitable for conventional liquid foliar and irrigation water applications. It does not need to be watered in for efficacy. It is not recommended to use this product through drip tape unless it is filtered through a 200-mesh screen first. When possible, foliar applications should be made in the morning hours to reduce leaf surface drying time and minimize the potential for encouraging disease activity.

At higher concentrations in solution, this product has the *potential* to stain or tint surfaces, such as concrete walks/drives, fencing, siding, plant foliage, flower petals, etc. Always test a small area when using the product for the first time to determine if there is any coloration the way you wish to use the product. If necessary, reduce the concentration in water until you find the threshold of acceptable coloration for your unique circumstances.

Turf, Fairways, Greens, and Tees		Woody Ornamentals and Vegetative Crops	
Rate Per Acre	Frequency	Rate per 100 gallons	Frequency
5 dry ounces	once per week	8 ounces	once per week
10 dry ounces	every two weeks	16 ounces	every two weeks
20 dry ounces	once per month	32 ounces	once per month
32 dry ounces	max one-time rate	The best results are always achieved by using lower rates at more frequent intervals.	

Pastures and Forage Crops		Other Applications	
Rate Per Acre	Frequency	Rate per gallon	Frequency
1 pound	per application	Potted Plants – ½ tsp	every 1-2 weeks
For best results, the grass/crop should be 8" or higher at the time of application.		Transplants – 2 tsp	foliar and root soak
